YOU CAN PLANT 1,000 TREES A DAY

The unusual sturdiness and strong root systems of Western Maine Evergreens makes them easy to plant. The special care they've received makes them grow vigorously in all soils and climates.

Follow these simple steps for quick, easy planting: (1) Insert spade straight in ground. (2) Pull back and push forward to form wedge shaped opening. (3) Spread roots carefully and place tree in hole. (4) Close opening, stamp soil on both sides firmly.

SCOTCH PINE

WHITE SPRUCE

BLACK HILL SPRUCE

SCOTCH PINE

For several years we have been experimenting with various strains of Scotch Pine and with seed from different sources. We believe that we now have a very good selection to choose from. The Austrian Hill strain seems to be fast growing and have good color. The French Highland strain seems to be quite compact and have excellent color. The North German strain is also a good grower and holds its color quite well.

*WHITE PINE

White Pine may be shipped into all states (and the district of Columbia) except Arizona, Colorado, Nevada, New Mexico, Utah and California.

AMERICA'S FINEST EVERGREENS

For Every Planting Need . . .

The most modern and scientific techniques of planting, propagating, fertilizing, spraying and handling are rigidly adhered to at Western Maine. Quality is our primary consideration. That's why Trees from Western Maine have healthier, more fibrous root systems; thicker, fuller foliage and straighter branches, richer color. Transplanting insures that our trees will grow quickly to full maturity under all conditions. You can buy and plant Western Maine trees and transplants with complete confidence for every shipment we make carries our unequivocal guarantee. (see back panel.)

TRANSPLANTING INFORMATION

The figure 2-2, shown in the price list, represents the number of years the trees have been in seed beds, the number of years in transplant beds and the number of times transplanted. The first figure indicates the number of years the trees remained in the seed bed before being transplanted. The second figure indicates the number of years the trees remained in the transplant bed. The total of the figures indicates the age of the tree and each dash represents one transplanting. Thus, a 2-2 Scotch Pine is a 4-year-old tree which remained in the seed bed two years, was transplanted and remained in the transplant bed two years.
